

Front-end Developer - Red River Software

Red River Software is an award-winning software development company who work with entrepreneurs and businesses to create industry-leading products, business-critical systems, apps, sites and other software in the B2C and B2B arenas. We work across a wide range of industries and with a diverse set of technologies - coupling technical innovation and problem-solving expertise with extensive product design and commercial experience.

Recent acclaim includes one of our founders winning Business Person of the Year 2016 and an award for "Best Science / Laboratory Advancement" for a recent SaaS scientific data analysis product. Current projects include an intelligent sports nutrition platform and a large charitable funding platform.

Job Description

Red River Software is looking to take on a front-end developer to join our expanding team. We are looking for agile, enthusiastic people who have a desire to take on a role building modern web applications using the latest technologies.

Your day-to-day activities will include:

- Turning designs and/or wireframes into something real (using HTML/Jade, CSS/LESS/SASS)
- JavaScript front-end development using frameworks such as AngularJS and React
- Working as a part of a larger multi-disciplined team using agile development methodologies

We'd also welcome someone who could contribute in the following ways:

- Back-end JavaScript development (node.js)
- Collaborating with Product Owners for UX / UI design
- Working on the Technical Steering Team to help shape the technologies and frameworks we use

Requirements

You'll need:

- An exceptional understanding of modern web design - HTML, CSS, responsive design
- Experience building sites / SPAs with a JavaScript front-end framework such as React, AngularJS or Ember.js
- A thirst for continual learning and modern web technology

These things would be great too:

- Experience with node.js, npm
- Experience with build systems such as grunt or gulp
- Experience with ES6
- An understanding of modern web back-end architecture - HTTP, REST, OAuth
- A solid working knowledge of git for source control
- Design/UX experience
- Familiarity with Adobe Creative Suite

Why work for us?

We value innovation and the creative application of technology, and have a track record of delivering industry-changing projects. If you have the skills and desire, you'll have a real chance to help shape the future of the company and grow along with it. We offer training and mentoring programmes and benefits including childcare vouchers, a Cycle to Work scheme, free parking and 25 days' annual holiday (plus bank holidays). We encourage creative play time to experiment with new tech, develop products in-house and have an internal team dedicated to investigating and adopting the latest technology.
